

## Magellan® Tunnel Reader Series: MSTRP-4040

### Magellan® Tunnel Reader Series: MSTRP-4040

The MSTRP-4040 Tunnel Reader has an aperture of 400x400mm and like the MSTRP-5050 is designed for use where large numbers of RFID tagged items require identification and tracking quickly and accurately.

The MSTRP-4040 Tunnel Reader eliminates the need to unpack and individually handle contents of packages when tracking items and saves precious time in the processing of goods. This tunnel will easily fit archive boxes, full of tagged documents or a standard size esky for the transportation of blood products.

#### Features

- Very high speed identification, reading, writing and verification of multiple tags, up to 600 tags per second
- Capable of writing reliably a unique 96-bit number such as an Electronic Product Code (EPC) at a rate of 40 tags per second
- Reliable identification of tightly stacked, overlapping and touching tags
- Operates with a wide range of PJM StackTag® inlets
- Linux based OS allows for powerful stand-alone operation
- Able to read and write to Tags in any orientation
- Robust design
- Offers USB and Ethernet interface options
